Testing Method 1: Unit Testing (Backend Logic)

Table 1: User Authentication & Role-Based Access Control (RBAC)

Test ID	Module	Scenario Being Tested	Expected Result	Actual Result	Pass/Fail
UT-01	Auth	Login with valid phone and password.	Returns HTTP 200 OK with JWT Access & Refresh tokens.	Returned 200 OK with tokens.	PASS
UT-02	Auth	Login with invalid password.	Returns HTTP 401 Unauthorized.	Returned 401 Unauthorized.	PASS
UT-03	Auth	Member Signup with an invalid/fake "Samuha Code".	Returns HTTP 400 Bad Request (Code not found).	Returned 400 Bad Request.	PASS
UT-04	RBAC	Regular 'Member' attempts to access Super Admin endpoint (/api/admin/samuhas).	Returns HTTP 403 Forbidden (Permission Denied).	Returned 403 Forbidden.	PASS

```python

Table 3: Financial Core (Savings & Expenses)

Test ID	Module	Scenario Being Tested	Expected Result	Actual Result	Pass/Fail

UT-08	Ledger	Staff records a Rs. 1000 Saving for a Member.	LedgerTransaction created; User's total balance increases by 1000.	Transaction saved & balance updated.	PASS
UT-09	Ledger	Submit a transaction with a negative amount (-500).	Returns HTTP 400 Bad Request (Validation Error).	Request blocked by serializer.	PASS
UT-10	Ledger	Record a Group Expense (e.g., Tea/Stationery).	Expense recorded; Samuha's Total Treasury balance decreases.	Treasury balance deducted correctly.	PASS
UT-11	Ledger	Fetch ledger history for a specific User.	Returns HTTP 200 OK with only that user's transaction list.	Returned isolated user data.	PASS

```python
class LedgerTests(APITestCase):
    def setUp(self):
        # 1. Create Samuha with proper fields
        self.samuha = Samuha.objects.create(
